

PAT Protective Film Winder

The PAT Protective Film Winder is electrically operated, capable of handling industrial films and papers 2 to 10-mils (0.002" - 0.010") thick, up to 7" wide. The automatic film feed length is adjustable by turning control knob on the power supply.

The PAT Protective Film Winder stands apart from its competitors in "White Room" applications where, as opposed to compressed air driven systems, its electronically controlled mechanical drive assembly releases no contamination into the atmosphere, thus maintaining white room integrity.

The Protective Film Winder can be installed in the PAT or Branson Sound Enclosure, split to work on two ultrasonic welders, or mounted to the outside of an integrated assembly unit.

PAT Film Winder installed in a Branson Sound Enclosure

PAT Film Winder split to work on two machines

PAT Film Winder mounted to the outside of an assembly unit

Features:

- Universal unit made to fit all brand of ultrasonic welders from 3.5 to 8" wide.
- 24V motor and control designed to provide quick interface between the ultrasonic welder and the film winder
- Easy to use controls, including built in "jog control" for manual feeding of film
- Feed roller path for positive film feed
- Provides direct path for waste film into trash container, eliminating take-up reel
- Removable film supply reel with built in flange & core provides quick and easy loading
- Sturdy but light, all aluminum construction
- Can be customized to fit within PAT Safety Sound Enclosure, Branson Sound Enclosure, or other enclosures or frameworks
